

Week 2 Rubrics

std	P (Proficient)	S (Sufficient)	D (Developing)	I (Insufficient)	N (No evidence)
2.1	Correctly applies casting in multiple contexts with clear variable names AND program integrates casting into a larger, error-free workflow.	Successfully converts string input to numbers (int, float) in simple programs.	Correct casting attempted but syntax issues or minor mistakes appear.	Logical misunderstandings (e.g., using int() incorrectly or not applying casting when needed).	No casting displayed.
2.2	Uses all required operators correctly in meaningful calculations and uses comments and appropriate naming conventions to explain reasoning AND program is robust and error-free.	Correctly uses required operators in simple expressions without errors.	Minor syntax errors but operations chosen logically.	Incorrect operators or misapplied arithmetic logic.	No usage of operators.
2.3	Uses multiple math module functions appropriately, integrating them into the program, and explains reasoning using comments and appropriate naming conventions.	Correctly imports math and uses required functions in simple contexts.	Minor errors such as misspelling function names or forgetting import.	Incorrect use of math features or logical misunderstandings.	No use of math module.
