Outcome 11 Rubrics

std	P (Proficient)	S (Sufficient)	D (Developing)	I (Insufficient)	N (No evidence)
11.1	Creates a clear class structure with functioning constructor and instance variables AND explains the design with comments and appropriate naming conventions AND correctly creates an instance of the object without error.	Correct class with working `__init__` method and proper instance variable assignment AND correctly creates and instance of the object without error.	Minor syntax issues (e.g., missing at most one `self` or indentations issues) but structure is correct OR correct class with working `__init__` method and proper instance variable assignment but without instantiating an instance of the object.	Incorrect constructor logic or class structure.	No class or constructor submitted.
11.2	Correct implements and calls constructor and instance methods (getters/setters) AND explains the design with comments and appropriate naming conventions	Correctly implements constructor instance methods (getters/setters) AND correctly creates an instance of the object without error.	Minor syntax or calling errors, but method purpose is recognizable (eg. adding a return to a setter or indentation errors)	Incorrect method definitions, misuse of `self` (eg. missing a return on a getter or forgetting a reference to self in method) OR missing a setter or getter.	No settters or getters submitted.
11.3	Correctly implements and calls constructor and instance methods AND combines internal object data into a computed or composed result correctly AND explains the design with comments and appropriate naming conventions	Correctly implements and calls constructor and instance methods AND combines internal object data into a computed or composed result correctly.	Minor mistakes in composition or return value but class is otherwise constructed correctly.	Incorrect logic for combining internal data OR class is missing major components (eg constructor or setters/getters).	No attempt at a method combining internal object data.
